## Hiring Manager, Technology — Optical & Hearing

Bupa HI Holdings Pty Ltd  
Melbourne, VIC

### RE: Technology Application Owner — Optical & Hearing, Bupa

Dear Hiring Manager,

I am applying for the Technology Application Owner role within Bupa's Optical & Hearing division. My background sits at the intersection of application lifecycle management, release governance, and cloud-based technical delivery — shaped by three years of managing enterprise applications across regulated, multi-vendor environments in China, Sweden, and Australia.

At ECARX, I owned the end-to-end application lifecycle for in-vehicle digital platforms deployed across Chinese and European markets, with Volvo and Polestar as OEM partners operating as managed service providers. In practice, this meant governing every stage from design and implementation through to change management, release gating, incident response, and continuous improvement. I established Go/No-Go gating criteria and phased release controls for parallel production and R&D environments, and built Jira-based application monitoring pipelines that gave leadership real-time visibility into defect trends, release readiness, and operational health. When incidents occurred, I led structured root-cause analysis across cross-functional squads — a process I standardised into a defect closure workflow that reduced average resolution cycles by approximately 30%. These are not product management abstractions; they are the operational disciplines this role requires.

On the technical side, I work hands-on with REST APIs, cloud platforms (AWS Lambda, API Gateway, S3, Azure), and relational databases — the same infrastructure stack that underpins most enterprise business applications. At FutureLab, I built and delivered back-end application modules covering authentication, relational data storage, and API integration across a three-country vendor team. At GlowCheck, I architected a serverless application backend achieving sub-200ms response times and designed a cloud data pipeline for application monitoring and trend analysis. This depth means I can engage authentically with engineering teams, vendors, and managed service providers without needing an intermediary — which is what effective application ownership requires.

I understand that Bupa's Optical & Hearing applications — whether practice management systems, clinical record platforms, or patient-facing booking tools — serve staff and customers at operationally critical moments. Downtime, degraded performance, or a failed release in that context has direct consequences for care delivery and business continuity. My instinct as an application owner is to treat every change decision as a risk decision: what is the blast radius, who needs to know, and what is the rollback plan. That mindset comes from working in regulated environments where the cost of a missed incident or an ungated release was measured in OEM partnership trust, not just sprint velocity.

I hold a PMP certification and AWS Certified AI Practitioner credential, and I am completing a Master of IT at Monash University, graduating July 2026, when my full-time work rights begin under a 485 Graduate Visa. I would welcome the opportunity to discuss how my application lifecycle and cloud delivery experience maps to Bupa's needs in this role.

Thank you for your consideration.

Yours sincerely,

**Nora Jin**
