Hiring Manager, Digital Data

Bupa HI Holdings Pty Ltd, Melbourne VIC

RE: Digital Data Specialist — Bupa

Dear Hiring Manager,

I am applying for the Digital Data Specialist role at Bupa. My background combines JavaScript-based digital product development, data layer architecture, and analytics pipeline design — the technical foundation this role requires to work effectively with development teams on tagging implementation and to maintain a robust digital data layer at scale.

The core of this role is ensuring the digital data layer is correctly implemented, maintained, and extended as products evolve. My closest direct experience is in data architecture: I have designed event-based data schemas and serverless data pipelines (AWS S3, Athena, Lambda) feeding real-time analytics into live digital products, and I understand the discipline of defining what data to capture, where in the customer journey to capture it, and how to structure it for downstream analysis. For PathwayIQ, a live career guidance platform I built end-to-end, I have designed a GA4 event tracking plan covering key customer journey touchpoints — search interactions, CTA clicks, autocomplete selection events, and conversion milestones — with a data layer variable schema and Google Tag Manager container architecture currently being implemented. This is directly the work described in the JD: defining tagging strategy, structuring data layer variables, and collaborating with developers on analytics implementation.

My JavaScript proficiency means I can engage directly with development teams on tag implementation rather than acting as a go-between — I can read, write, and debug the event-firing logic that underpins any tag management solution, whether Google Tag Manager, Tealium, or equivalent. My analytics mindset comes from three years of building and communicating data-driven insights in regulated environments: at ECARX, I synthesised customer feedback and digital metrics into change-impact assessments that directly shaped product decisions for Volvo and Polestar OEM partners, and built stakeholder dashboards that translated pipeline data into clear insight narratives for executive audiences. I am actively building hands-on capability in Adobe Analytics, Adobe Target, and Tealium to close the gap on Bupa's specific tooling, and I bring an Agile delivery mindset from consistent sprint-based product team work.

I hold an AWS Certified AI Practitioner credential and PMP certification, and I am completing a Master of IT at Monash University with full-time work rights from July 2026. I would welcome the opportunity to discuss how my data architecture background and JavaScript depth fit the Digital Data Specialist role at Bupa.

Yours sincerely,

Nora Jin
