Hiring Manager, Digital Product

Bupa HI Holdings Pty Ltd

Melbourne, VIC

RE: Digital Product Manager — Bupa

Dear Hiring Manager,

I am applying for the Digital Product Manager role at Bupa. With three years of end-to-end product delivery experience across automotive digital platforms, cloud-based systems, and enterprise software — and a consistent track record of owning roadmaps from discovery through to release — I am ready to bring that rigour to Bupa's digital experience products.

At ECARX, I owned the full product lifecycle for in-vehicle digital platforms deployed across Chinese and European markets. Working within a regulated, multi-stakeholder environment with Volvo and Polestar as OEM partners, I drove product discovery by synthesising customer and OEM feedback into structured backlog priorities, defined Go/No-Go gating criteria, and coordinated cross-functional squads spanning R&D, QA, and business teams across time zones. A standardised defect triage process I implemented reduced issue resolution cycles by approximately 30% — not a technical fix, but a product decision about how squads should work together. I also built Jira analytics dashboards that gave leadership real-time visibility into sprint velocity, defect trends, and release readiness, which is the kind of analytics-driven delivery rigour I would bring to Bupa's digital booking and customer experience pathways.

I understand that a health insurance digital platform serves customers at moments that genuinely matter — managing a claim, booking care, understanding coverage. That context shapes how I think about product: discovery should be anchored in actual customer journeys, prioritisation should balance user needs against commercial outcomes, and every release decision carries real-world consequences for real people. My human-centred design thinking has been applied most recently at PathwayIQ, a career guidance platform I led end-to-end as PM and technical contributor, where I shipped a multi-feature product across iterative Agile sprints— including an AI-powered analytics layer built on government labour market data. I am also comfortable with A/B and multivariate testing frameworks as a tool for validating product decisions with evidence rather than opinion.

On the technical side, my background spans REST API integration, serverless architecture (AWS Lambda, API Gateway), and full-stack development (JavaScript, Python, Node.js, Next.js). This lets me engage authentically with engineering squads— reviewing trade-offs, writing informed acceptance criteria, and moving fast on delivery— without becoming a bottleneck on either side. I hold a PMP certification and AWS Certified AI Practitioner credential, and I am completing a Master of IT at Monash University, graduating July 2026, when my full-time work rights begin.

I am drawn to Bupa specifically because digital product at Bupa sits at the intersection of healthcare access, commercial scale, and genuine customer impact— which is exactly the kind of product context that motivates me to do my best work. I would welcome the opportunity to discuss how my experience maps to your team's priorities.

Thank you for your consideration.

Yours sincerely,

Nora Jin
