Hiring Manager, Engineering

Bupa HI Holdings Pty Ltd, Melbourne VIC

RE: Full Stack Software Engineer — Bupa

Dear Hiring Manager,

I am a full stack engineer with three years of production delivery experience across JavaScript, Next.js, React, Node.js, Python, Docker, REST APIs, SQL, and CI/CD pipelines — built across enterprise software, cloud-native backends, and regulated multi-vendor environments in China, Sweden, and Australia. I am applying for the Full Stack Software Engineer role at Bupa because the technical scope — system integration, testable software design, Agile delivery in enterprise applications — maps directly to the work I have been doing.

My serverless architecture experience is extensive on AWS (Lambda, API Gateway, S3, DynamoDB, Cognito), with design patterns functionally equivalent to Azure Functions and Azure Service Bus event-driven models. I containerise with Docker, manage deployments via CI/CD pipelines, and apply infrastructure as code principles — demonstrated most concretely in a Kubernetes elastic deployment project where Locust regression testing across 1–8 Pods drove a 41% response time improvement. On the frontend, I have shipped full-stack SPAs in Next.js and React with REST API integration, HTML/CSS, and testable component design. I am actively upskilling in .NET Core API, Azure DevOps, and Microsoft SQL Server to close the gap on Bupa's specific stack, and I hold an AWS Certified AI Practitioner credential alongside a PMP certification.

At ECARX, working across CN–EU environments with Volvo and Polestar as OEM partners, I owned defect lifecycle management, regression test tracking, and Go/No-Go release readiness across production and R&D environments — reducing resolution cycles by approximately 30% through standardised triage and root-cause analysis. This is where my instinct for testable software design and CI/CD discipline was formed: in a context where an ungated release or an untracked regression had real consequences for delivery and partnership trust.

I am completing a Master of IT at Monash University and will have full-time work rights from July 2026. I would welcome the opportunity to discuss how my stack and engineering approach fits Bupa's team.

Yours sincerely,

Nora Jin
